

### **Function**

Rod seals are designed to seal the pressurized hydraulic fluid against the atmosphere, preventing leakage and pollution of the environment.

### **Features**

- ⇒ Asymmetrical, double acting compact rod seal, designed with interference on the OD which provides a good static fit in the groove.
- ⇒ Excellent static and dynamic sealing performance.
- ⇒ Excellent performance in low pressure conditions.
- ⇒ Negligible tendency to “stick-slip” effect.
- ⇒ High break-away load after long standstills.
- ⇒ Activated back-up rings reduce gap extrusion and prevent twisting of the seal in the groove.

### **Application**

Reciprocating rods in hydraulic cylinders, plungers.

Static and dynamic seals in hydraulic systems, replacement for O-Rings (no twisting or pumping).

Max. pressure 700 bar, max. speed 0.5 m/s.

### **Installation**

Snap-in installation.
